

## M + X-PRO Series Evalkit Accessories

Evaluation Kit Accessories for M-PRO & X-PRO Series amplifier modules

The Evaluation Kit Accessories comprises I/O-board and connection cables and documentation for easy performance evaluation and subsequent design-in purposes with any M-PRO or X-PRO Series amplifier module.

### Easy Evaluation & Listening Test

The Evaluation Kit Accessories allows you to setup a listening test on any Pascal M-PRO or X-PRO Series amplifier modules in a few minutes. The only additional things needed are standard PowerCon, Speakon, XLR-cables and an external DSP-controller to set cross-overs and equalisation.

### Easy Prototyping & Implementation

An application guide is included with the Evaluation Kit Accessories which shows how to implement the M-PRO & X-PRO Series as well as a fast prototyping guide. The I/O board can be used for first prototyping as its size matches the width and height of the amplifier modules.

The enclosed I/O-board provide easy connection of input signals, LED status indicators, control switches for relevant functions as well as PCB measurements points.
